

Package ‘ReproducibilitySodhi2023’

October 30, 2023

Type Package

Title Reproduction of Sodhi Study in JAMA 2023

Version 0.1.0

Date 2022-03-23

Author Asieh Golozar [aut, cre]

Maintainer Asieh Golozar <a.golozar@northeastern.edu>

Description

A skeleton package, to be used as a starting point when implementing comparative effect studies.

Depends R(>= 4.0.0),
DatabaseConnector (>= 5.0.2)

Imports SqlRender (>= 1.8.3),
EmpiricalCalibration (>= 3.0.0),
Cyclops (>= 3.1.2),
FeatureExtraction (>= 3.2.0),
CohortMethod (>= 4.2.2),
ggplot2,
Andromeda (>= 0.6.0),
CohortGenerator (>= 0.4.0),
dplyr,
tibble,
readr,
rlang,
MethodEvaluation (>= 2.2.0),
OhdsiSharing (>= 0.2.2),
ParallelLogger (>= 3.0.0),
survival,
plyr,
jsonlite

Suggests knitr,
rmarkdown,
DT,
shiny,
EvidenceSynthesis (>= 0.2.3),
meta

Remotes ohdsi/FeatureExtraction,
ohdsi/CohortMethod,
ohdsi/MethodEvaluation,

ohdsi/OhdsiSharing,
ohdsi/CohortGenerator,
ohdsi/ParallelLogger,
ohdsi/DatabaseConnector,
ohdsi/CohortGenerator

License Apache License 2.0

R topics documented:

execute	2
launchEvidenceExplorer	4
prepareForEvidenceExplorer	5
synthesizeResults	6
uploadResults	7
Index	8

execute	<i>Execute the Study</i>
---------	--------------------------

Description

Execute the Study

Usage

```
execute(  
  connectionDetails,  
  cdmDatabaseSchema,  
  cohortDatabaseSchema = cdmDatabaseSchema,  
  cohortTable = "cohort",  
  cohortInclusionTable = paste0(cohortTable, "_inclusion"),  
  cohortInclusionResultTable = paste0(cohortTable, "_inclusion_result"),  
  cohortInclusionStatsTable = paste0(cohortTable, "_inclusion_stats"),  
  cohortSummaryStatsTable = paste0(cohortTable, "_summary_stats"),  
  cohortCensorStatsTable = paste0(cohortTable, "_censor_stats"),  
  oracleTempSchema = NULL,  
  tempEmulationSchema = getOption("sqlRenderTempEmulationSchema"),  
  verifyDependencies = TRUE,  
  outputFolder,  
  databaseId = "Unknown",  
  databaseName = "Unknown",  
  databaseDescription = "Unknown",  
  createCohorts = TRUE,  
  synthesizePositiveControls = TRUE,  
  runAnalyses = TRUE,
```

```

packageResults = TRUE,
maxCores = 4,
minCellCount = 5
)

```

Arguments

connectionDetails	An object of type connectionDetails as created using the createConnectionDetails function in the DatabaseConnector package.
cdmDatabaseSchema	Schema name where your patient-level data in OMOP CDM format resides. Note that for SQL Server, this should include both the database and schema name, for example 'cdm_data.dbo'.
cohortDatabaseSchema	Schema name where intermediate data can be stored. You will need to have write privileges in this schema. Note that for SQL Server, this should include both the database and schema name, for example 'cdm_data.dbo'.
cohortTable	Name of the cohort table.
cohortInclusionTable	Name of the inclusion table, one of the tables for storing inclusion rule statistics.
cohortInclusionResultTable	Name of the inclusion result table, one of the tables for storing inclusion rule statistics.
cohortInclusionStatsTable	Name of the inclusion stats table, one of the tables for storing inclusion rule statistics.
cohortSummaryStatsTable	Name of the summary stats table, one of the tables for storing inclusion rule statistics.
cohortCensorStatsTable	Name of the censor stats table, one of the tables for storing inclusion rule statistics.
oracleTempSchema	DEPRECATED: use 'tempEmulationSchema' instead.
tempEmulationSchema	Some database platforms like Oracle and Impala do not truly support temp tables. To emulate temp tables, provide a schema with write privileges where temp tables can be created.
verifyDependencies	Check whether correct package versions are installed?
outputFolder	Name of local folder to place results; make sure to use forward slashes (/). Do not use a folder on a network drive since this greatly impacts performance.
databaseId	A short string for identifying the database (e.g. 'Synpuf').
databaseName	The full name of the database (e.g. 'Medicare Claims Synthetic Public Use Files (SynPUFs)').
databaseDescription	A short description (several sentences) of the database.
createCohorts	Create the cohortTable table with the exposure and outcome cohorts?

synthesizePositiveControls	Should positive controls be synthesized?
runAnalyses	Perform the cohort method analyses?
packageResults	Should results be packaged for later sharing?
maxCores	How many parallel cores should be used? If more cores are made available this can speed up the analyses.
minCellCount	The minimum number of subjects contributing to a count before it can be included in packaged results.

Details

This function executes the ReproducibilitySodhi2023 Study.

The createCohorts, synthesizePositiveControls, runAnalyses, and runDiagnostics arguments are intended to be used to run parts of the full study at a time, but none of the parts are considered to be optional.

Examples

```
## Not run:
connectionDetails <- createConnectionDetails(
  dbms = "postgresql",
  user = "joe",
  password = "secret",
  server = "myserver"
)

execute(connectionDetails,
  cdmDatabaseSchema = "cdm_data",
  cohortDatabaseSchema = "study_results",
  cohortTable = "cohort",
  oracleTempSchema = NULL,
  outputFolder = "c:/temp/study_results",
  maxCores = 4
)

## End(Not run)
```

launchEvidenceExplorer

Launch the SqlRender Developer Shiny app

Description

Launch the SqlRender Developer Shiny app

Usage

```
launchEvidenceExplorer(dataFolder, blind = TRUE, launch.browser = TRUE)
```

Arguments

dataFolder	A folder where the data files for the Evidence Explorer app will be stored. Use the prepareForEvidenceExplorer to populate this folder.
blind	Should the user be blinded to the main results?
launch.browser	Should the app be launched in your default browser, or in a Shiny window. Note: copying to clipboard will not work in a Shiny window.

Details

Launches a Shiny app that allows the user to explore the evidence

prepareForEvidenceExplorer

Prepare results for the Evidence Explorer Shiny app.

Description

Prepare results for the Evidence Explorer Shiny app.

Usage

```
prepareForEvidenceExplorer(resultsZipFile, dataFolder)
```

Arguments

resultsZipFile	Path to a zip file containing results from a study executed by this package.
dataFolder	A folder where the data files for the Evidence Explorer app will be stored.

Examples

```
## Not run:  
# Add results from three databases to the Shiny app data folder:  
prepareForEvidenceExplorer("ResultsMDCD.zip", "/shinyData")  
prepareForEvidenceExplorer("ResultsMDCR.zip", "/shinyData")  
prepareForEvidenceExplorer("ResultsCCAE.zip", "/shinyData")  
  
# Launch the Shiny app:  
launchEvidenceExplorer("/shinyData")  
  
## End(Not run)
```

synthesizeResults	<i>Conducts a meta-analysis across PLE result sets</i>
-------------------	--

Description

Conducts a meta-analysis across PLE result sets

Usage

```
synthesizeResults(
  allDbsFolder,
  maExportFolder = allDbsFolder,
  maxCores = 1,
  method = "BayesianNonNormal",
  resultsZipPattern = "^Results_.*\\.zip",
  addTraditional = TRUE
)
```

Arguments

allDbsFolder	Folder on the local file system containing the individual zip files across databases (i.e., sites)
maExportFolder	A local folder where the meta-analysis results will be written. If not specified, results will be written to same directory with all other results.
maxCores	Maximum number of CPU cores to be used when computing the meta-analyses.
method	The meta-analysis method to use. Possible values are "BayesianNonNormal" (Schumie et al.) or "DL" (DerSimonian-Laird).
resultsZipPattern	The pattern of the names of the zip files containing the exported results of each database.
addTraditional	Boolean indicating if traditional meta-analysis (i.e., "DL") results should be added to result (if method is "BayesianNonNormal").

Details

Conducts a meta-analysis across result sets generated from a population level effect (PLE) study package. Meta-analysis methodology is based on DerSimonian and Laird (1986) or Schuemie et al. (2021).

Value

Does not return a value, but creates a new zip file in the `maExportFolder` for the meta-analyses.

uploadResults	<i>Upload results to OHDSI server</i>
---------------	---------------------------------------

Description

Upload results to OHDSI server

Usage

```
uploadResults(outputFolder, privateKeyFileName, userName)
```

Arguments

outputFolder	Name of local folder where the results were generated; make sure to use forward slashes (/). Do not use a folder on a network drive since this greatly impacts performance.
privateKeyFileName	A character string denoting the path to the RSA private key provided by the study coordinator.
userName	A character string containing the user name provided by the study coordinator.

Details

This function uploads the 'Results_<databaseId>.zip' to the OHDSI SFTP server. Before sending, you can inspect the zip file, which contains (zipped) CSV files. You can send the zip file from a different computer than the one on which it was created.
